

Company Profile -

JUNG ANTRIEBSTECHNIK U. AUTOMATION GMBH, Wettenberg

The kinematics & drives specialist!

JUNG ANTRIEBSTECHNIK U. AUTOMATION GMBH (JA²) has its registered office in Wettenberg, Germany. The company was founded by dipl.-physicist Wilhelm Jung, who still runs it as managing director to this day.

Since its inception the company has been working with high-dynamic electric servo and positioning technology and their applications. Initially beginning with rotative servo applications, in 2001 the focus of JA² started shifting to the marketing of linear motor drives. In 2008, the gained experiences enabled the company to begin with the development of one of the most extensive product ranges of mechatronic systems based on linear motors. Since then, JA² has linear direct drives with all four basic physical principles in their program.

By now, the company has established itself as one of the leading addresses when it comes to linear motor systems. It currently offers one of the widest ranges of linear direct drives (10 N up to 6.750 N peak force) and the corresponding mechanics and control components in the German market.

Application focus lies on high-dynamic motion automation.
