

HighDynamic[®]

Linear Motor Modules & Linear Motor Guides - The Modular Construction Kit!

HM01 Linear Motor Modules

HA01 Linear Motor Guides

- **HighDynamic[®]** stands for guaranteed mechanical operating data of 5 m/s & 150 m/s²
- tubular linear direct drives integrated

Overview and Applications of the *HighDynamic*[®] Units

HighDynamic[®] is a construction kit consisting of linear modules and guides with integrated linear drives. All *HighDynamic*[®] modules and guides are specified for continuous mechanical operations with 5 m/s and 150 m/s² - which is what the name *HighDynamic*[®] stands for!

Through many years of experience in direct drive applications and mechatronics we were able to develop and realize our *HighDynamic*[®] units. Based on the typical construction with only one guide rail, the units combine a lean shape and very low moving masses. The use of innovative bearing technology allows high torsional stiffness, high peak velocity, very high accelerations, long operational life and low expenses.

The HM01 linear modules are an ideal construction element for short stroke applications, whereas the HA01 guides are suitable for long stroke applications.

Modularity allows the combination of HM01 modules and HA01 guides to receive complete multi-axes handling systems.

A number of various options complete the program and make the *HighDynamic*[®] product family available for most applications.

Product Overview

Positioning Controller

HighDynamic[®] positioning controllers include a static inverter, positioning control and interfaces to machine controls.

The motion controllers are able to realize simple point to point applications, as well as complex motion profiles. Standard fieldbuses and parallel I/O's enable the integration of *HighDynamic*[®] systems into existing and new machine concepts.

Linear direct drives & mechatronic solutions from a single source!

HighDynamic[®] Options

Various options complete the program and make the product family available for most applications.

- MagSpring[®] mountings for vertical applications
- pneumatic brakes
- cooling fans
- external measuring systems for repeatability of +/- 0,001 mm
- wipers for rough environments

Available linear drive types

The modules and guides are available for all current *LinMot[®]* motor types and versions. This allows the option of using the most suitable solution for any application

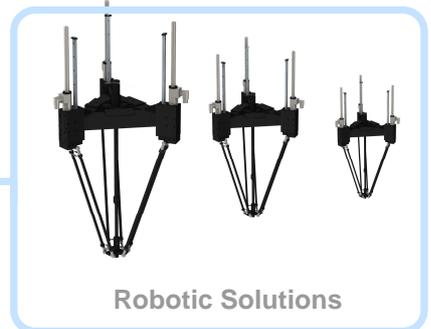

- standard motors
- motors with F winding
- high-performance motor series
- heavy-duty sliders
- high-clearance sliders
- connector options
